

ITP DUNE STAR TIRES

Tearing through the dunes in a Side X Side is even more fun with a set of ITP's new Dune Star tires in the rear and Sand Star tires up front. Prior to the introduction of this tire package, keeping a Side X Side moving through the dunes has been a challenge. With the Dune Star's offset "V" pattern paddle shape, the power transferred to the sand is unreal. This is one of the few times that you actually have to back off the throttle in the dunes.

The front Sand Star tires are very responsive and rip through the dunes, making every hill conquerable. This combination is a true duner's dream. When we were out in the dunes with these tires, we let a couple of people drive the Teryx and everyone came back wanting a set for their own vehicle. It's been a long time since a single product put a smile on my face – and the new tire setup did more than that!
