

CAN-AM DS 450 SPORT ATV WHEEL UPDATE (1/7/08)

The Can-Am DS 450 Sport ATV uses the same applications as the Honda set-up:

Front Bolt Pattern is 4/144

Rear Bolt Pattern is 4/110

Please note that Can-Am used a different thread pitch on their lug nuts and studs. All other sport ATV's on the market use a 10mm lug nut with a 1.25 tread pitch, but Can-Am used a 10mm lug nut with a 1.50 thread pitch. Also, the Can-Am stock lug nut is flat based – not tapered.

All of our wheels will fit the Can-Am, but some of our wheels require a different lug nut which is tapered. Currently we do not have any lug nuts with the 1.50 thread pitch. We are in the process of getting one made and should have them available 03/01/08.

For right now these are the wheels that work with no problems using the stock lug nut:

T-9 Pro Series

T-9 Pro Series Baja

These are the wheels that fit, but do require a different lug nut that we do not have yet:

T-9 Pro Series GP

T-9 Pro Series Pro-Lock

T-9 Pro Series Trac-Lock

SS112 Sport Wheels

C-Series Sport Wheels
